Case Study: Industrial

AIT solutions help powersports manufacturer reap benefits of just-in-time production

The Summary:

In the fast-paced world of just-in-time (JIT) industrial production, one powersports manufacturer needed a freight forwarder who could scale, flex and—most importantly—deliver raw materials and components as needed. For four years, AIT's customizable industrial logistics solutions have helped the customer grow their bottom line.

The Challenge:

Tight production timelines without inventory buffer

While the customer's streamlined JIT manufacturing environment keeps inventory low, cutting costs and increasing efficiency, it's also susceptible to supply and demand shocks—at worst, if manufacturing is temporarily suspended, the lingering line-down situation can potentially cost millions of dollars.

To keep production running smoothly, the customer needed a freight forwarder who could quickly communicate and operate across its global procurement regions in Europe and Asia, while efficiently and cost-effectively moving inventory to its North American manufacturing facilities in lockstep with production schedules.

The Solution: All-in-one, combined approach

Combining air freight to the United States, ground transportation across North America and customs brokerage services, AIT's JIT industrial logistics experts delivered seamless, door-to-door solutions for sourcing and shipping components and materials from Asia and Europe to the customer's North American manufacturing facilities.

AlT also supports the customer's JIT requirements by providing:

- International sourcing and procurement support
- Purchase order (PO) origin pickup
- Export clearance
- Airport recovery services
- Bonded trucking to North American manufacturing destinations via exclusiveuse vehicles
- Electronic data integration for ITproduction line alignment

The AIT Difference Makers

- A fast, flexible and more affordable solution
- Real-time communication with partners and AIT locations in Asia and Europe enables 24/7 operational support
- Unmatched speed to quote
- Consistent and proactive process communication

The Result: Efficiently filled POs boost bottom line

AIT handles thousands of individual PO transactions for the customer annually—from electronic components to drive shafts to fabricated assembly parts and more—consistently meeting or exceeding requirements for on-time delivery and other critical key performance indicators.

In addition to protecting the customer from sevenfigure losses due to line-down situations, AlT's scalable industrial logistics solutions pivot from supporting increased consumer demand to dialing down inventory as needed, meeting production challenges while maintaining cost efficiency.
