

AIT Contract Logistics for Automotive Supply Chains

Integrated logistics for production continuity, aftermarket distribution and time-critical operations

Automotive supply chains demand speed, precision, visibility and disciplined execution across every handoff. Whether supporting inbound to manufacturing, managing parts flow, staging components for production or enabling global aftermarket distribution, AIT Contract Logistics connects your operation under one accountable partner.

From production parts to EV batteries and finished vehicles, we help reduce risk, minimize downtime and keep supply chains moving. Our solutions combine facility operations, inventory control, value-added services, transportation management and digital visibility—delivering more than traditional 3PL warehousing.

Built around your operation—not ours

AIT designs programs around your production schedules, supplier networks, part profiles and service requirements. From inbound receipt through outbound distribution and returns, we align workflows, systems and stakeholders to keep materials flowing as demand shifts.

Core contract logistics solutions and services

Inbound to manufacturing

Supplier receipt, cross-dock and production-ready staging to support continuous flow.

- Reduces line-down risk
- Coordinates global inbound supply

Inventory and production support

Controlled inventory, sequencing and delivery aligned to production schedules.

- Real-time inventory visibility
- Pre-sequencing and kitting
- Optimized inventory positioning

Kitting and fulfillment

Component kitting, labeling and B2B fulfillment for production and aftermarket channels.

- Streamlines assembly workflows
- Improves accuracy with scan validation
- Supports dealer and service networks

Outbound distribution

Multimodal delivery across domestic and global networks.

- Expedited options for critical shipments
- Time-definite delivery models
- End-to-end shipment visibility

Prototypes and specialized cargo

Handling of test units, prototypes and high-value automotive assets.

- Supports product launches and testing
- Specialized handling for sensitive freight
- Coordinated global execution

Returns and reverse logistics

Inspection, triage and disposition workflows for parts and components.

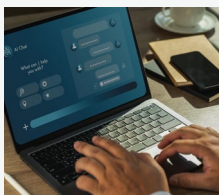

- Supports warranty and aftermarket flows
- Accelerates recovery decisions
- Integrates forward and reverse logistics

Implementation and control

Structured onboarding with defined workflows, ownership and KPIs.

- Process mapping and system alignment
- KPI-driven performance tracking
- Controlled go-live execution

Why automotive shippers choose AIT

Visibility and communication

Clear reporting and proactive updates across complex supply chains.

End-to-end control

One integrated model from inbound to distribution and returns.

Production continuity

Rapid response to disruptions with expedited and line-down support.

Cost efficiency

Leverage scale, network and procurement to reduce complexity and spend.

Specialized handling

Expert support for batteries, prototypes and high-value components

Flexible distribution

Right mode, right service level across global networks.

A growing contract logistics footprint

AIT supports global contract logistics programs with a network aligned to automotive manufacturing and distribution hubs—enabling proximity to suppliers, plants and customers.

A partner that works as part of your team

AIT Contract Logistics helps your team stay focused on production, customers and growth while we manage the logistics behind the scenes—from inbound coordination to outbound distribution and returns.
