

AIT Contract Logistics for Food Supply Chains

Integrated contract logistics solutions for temperature-sensitive, high-compliance food distribution

Food supply chains demand precision, consistency, and strict adherence to quality and safety standards at every touchpoint. Whether you are managing inbound ingredients, staging products for retail distribution, supporting production schedules, or handling returns and recalls, AIT Contract Logistics helps connect the critical components of your operation under one experienced partner.

Our solutions go beyond basic storage or a one-size-fits-all 3PL model. AIT combines facility operations, inventory control, value-added services, transportation management, specialized handling, and digital visibility to help food shippers move products with greater control, compliance, and confidence

Built around your operation—not ours

AIT designs contract logistics programs around your product requirements, temperature controls, shelf-life constraints, regulatory needs, order channels, and service expectations. From inbound receipt through outbound distribution and returns, our teams help define the operating model, execute daily operations, and adapt as demand, seasonality, and market conditions shift.

Core contract logistics product solutions and services

Solution area	AIT services
Inbound to production and distribution facilities	Supplier receipt, cross-dock, inventory control, lot tracking, quality holds, and coordination aligned to production schedules and distribution timelines.
Inventory, storage and staging management	Lot-controlled inventory, FIFO/FEFO management, temperature-controlled storage, shelf-life monitoring, and controlled release to production, retail, or distribution channels.
Pick, pack, kitting and fulfillment	Order fulfillment, retail-ready packaging, labeling, promotional kitting, subscription or sample programs, and B2B/B2C fulfillment with compliance to food safety standards.
Outbound distribution and final-mile options	Parcel, LTL, FTL, dedicated delivery, appointment scheduling, proof of delivery, and specialized handling for temperature-sensitive or time-critical food shipments.
Cold chain and specialized handling	Temperature-controlled environments, monitored storage and transit conditions, packaging support, and handling processes designed to protect product integrity throughout the supply chain.
Returns, recalls and value-added processing	Returns management, inspection, product segregation, traceability, recall support, disposition routing, and reporting to support regulatory compliance and product recovery decisions.
Implementation blueprinting and control	Scope validation, process mapping, compliance requirements, systems integration, KPIs, exception management, and structured go-live planning before execution begins.

Why food shippers choose AIT

Product integrity and compliance:

Maintain strict temperature control, traceability, and handling standards to protect product quality and meet regulatory requirements.

Distribution flexibility:

Match shipment needs to the right service level across parcel, LTL, FTL, dedicated, and specialized delivery solutions

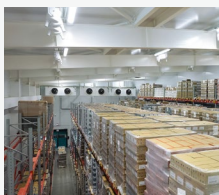

End-to-end operational control:

Connect inbound supply, inventory management, fulfillment, distribution, and returns through one accountable logistics model.

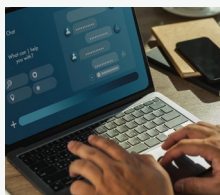

Cost efficiency:

Reduce the cost and operational burden of managing complex food logistics programs while scaling with demand

Temperature-sensitive expertise:

Support fresh, frozen, refrigerated, and shelf-stable products with specialized storage, handling, and monitoring processes.

Visibility and communication:

Gain clear reporting, proactive updates, and transparency across inventory, orders, and shipments.

A growing contract logistics footprint

AIT supports contract logistics programs in key markets worldwide, with a global network of facilities designed to provide flexible access to storage, fulfillment, and distribution infrastructure closer to suppliers, production sites, retail networks, and end customers.

A partner that works as part of your team

AIT Contract Logistics helps your organization stay focused on product quality, brand reputation, and growth—while we manage the operational complexity behind the scenes, from inbound planning and storage to fulfillment, distribution, and returns.
